Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.58.
 OA Risk Category: The DI is between 0.50 and 0.69. This patient is at moderate risk for hip OA.
 Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 21663 canine patients of the GOLDEN RETRIEVER breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.32 - 0.80) for the breed. The breed average DI is 0.53 (solid square). The patient DI is the solid circle (0.58).

SUMMARY: The degree of laxity (DI = 0.58) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a moderate risk to develop hip OA. **No radiographic evidence of OA for either hip.**
